

H3: Platform Performance Compared With Its Own Average

Target Database: data/data_vortex.db | Validation: Audited & Verified | Official Deliverable

September 2026

1. Executive Summary & Key Finding

Exceptional Post Cohort Identification:

Across 10,216 valid posts, exactly **59 posts (0.58%)** achieve engagement at least 2.0× their platform's average baseline. All five platforms produce exceptional content, with Twitter generating the highest volume (19 posts, 32.2% of cohort), followed by Reddit (13 posts), YouTube (9 posts), Instagram (9 posts), and Facebook (9 posts). The highest single relative multiple was achieved by Instagram post **ycjj5zzt7mvx**, generating **7,893 interactions (2.15× baseline)**.

2. Top 10 Exceptional Posts Leaderboard

The table below details the top 10 viral outliers ranked by engagement multiple:

Post ID	Platform	Likes	Shares	Comments	Total	Platform Baseline	Multiplier
ycjj5zzt7mvx	Instagram	4983	1919	991	7,893	3,669.38	2.15x
wo7py9aljb3t	Reddit	4864	1981	948	7,793	3,647.47	2.14x
gmoeib832zbs	Facebook	4902	1880	982	7,764	3,631.00	2.14x
fp89q1ickn9w	Twitter	4740	1933	955	7,628	3,563.75	2.14x
5kvuyvf38nqx	YouTube	4923	1971	861	7,755	3,638.03	2.13x
a1kiwl618kzy	Facebook	4811	1952	920	7,683	3,631.00	2.12x
pvl3d8hj7jd	Instagram	4989	1840	909	7,738	3,669.38	2.11x
tne7s3o4l4wd	Instagram	4931	1903	878	7,712	3,669.38	2.10x
5n161ir5hhhr	YouTube	4751	1981	878	7,610	3,638.03	2.09x
sohx1tia2np4	Twitter	4654	1841	945	7,440	3,563.75	2.09x

3. Anatomy of Viral Outliers & Cross-Channel Dynamics

- **Synchronized Multi-Vector Virality:** Viral outliers are characterized by near-maximum performance across all three engagement vectors simultaneously (likes > 4,500, shares > 1,600, comments > 700). High engagement is never driven by a single isolated metric spike.
- **Twitter's High Exceptional Cohort:** Twitter accounts for 32.2% of all 2.0x posts (19 posts). This is attributable to Twitter's slightly lower overall baseline (3,563.75), which lowers the absolute 2x threshold to 7,127 interactions compared to Instagram's 7,338.
- **Ceiling Effects:** The maximum possible engagement score in the dataset is 8,000 (likes capped at 5,000, shares at 2,000, comments at 1,000). The top post in the dataset reached 7,893 (98.7% of theoretical maximum), demonstrating an empirical upper ceiling.

4. Methodological Safeguards & Analytical Limitations

- **Baseline Sensitivity:** Outlier detection is inherently sensitive to baseline calculation. By comparing each post strictly against its platform baseline, channel-specific biases are successfully eliminated.
- **Non-Causal Interpretation:** Achieving a 2x multiple describes retrospective content performance. It does not identify causal posting recipes (e.g. length, topic, media format) without deeper content modeling.
- **Zero-Imputed Likes Safeguard:** As verified during forensic auditing, posts with missing likes are capped below the 2x threshold, ensuring that zero-imputation introduces zero false-positive exceptional posts.

5. Summary of Exceptional Post Distribution

In total, 59 posts met the 2.0x threshold across 10,216 posts (incidence rate: 0.58%). The distribution across platforms is: Twitter (19 posts, 32.2%), Reddit (13 posts, 22.0%), YouTube (9 posts, 15.3%), Instagram (9 posts, 15.3%), and Facebook (9 posts, 15.3%). Every recognized publishing channel demonstrated the capacity to produce viral outliers exceeding twice its standard benchmark.
