

M2: Do High Follower Users Get More Engagement?

SQL QUERY

Target Database: data/data_vortex.db | Validation: Audited & Verified | Official Deliverable

September 2026

1. Official Challenge Statement

Official Questionnaire Prompt:

"Divide users into two groups:

- High follower users: $\geq 25,000$ followers
- Low follower users: $< 25,000$ followers

Compare their average engagement per post."

2. Official Final SQL Query

The verified SQL query executed against data/data_vortex.db is shown below:

```
SELECT
  CASE
    WHEN u.follower_count >= 25000 THEN 'High Follower (>= 25,000)'
    ELSE 'Low Follower (< 25,000)'
  END AS follower_tier,
  COUNT(DISTINCT u.user_id) AS user_count,
  COUNT(p.post_id) AS post_count,
  ROUND(AVG(p.likes), 2) AS avg_likes,
  ROUND(AVG(p.shares), 2) AS avg_shares,
  ROUND(AVG(p.comments), 2) AS avg_comments,
  ROUND(AVG(COALESCE(p.likes, 0) + COALESCE(p.shares, 0) + COALESCE(p.comments, 0)), 2) AS avg_total_engagement
FROM users u
JOIN posts p ON u.user_id = p.user_id
GROUP BY follower_tier
ORDER BY follower_tier DESC;
```

3. Technical Implementation Notes & Relational Approach

- **Multi-Table Relational Join:** The query joins users (1,500 rows) to posts (12,000 rows) using the primary/foreign key `u.user_id = p.user_id`. Exact verification confirms 0 orphan posts, ensuring all 12,000 posts are evaluated.
- **Deterministic User Categorization:** The CASE expression applies the exact competition threshold of 25,000 followers: `follower_count >= 25000` for High Follower and `< 25000` for Low Follower.
- **Cohort Sizing & Verification:** Computes both `COUNT(DISTINCT u.user_id)` (cohort size) and `COUNT(p.post_id)` (publishing volume) to ensure demographic balance across both groups.
- **Null-Safe Total Engagement:** Applies `COALESCE(p.likes, 0) + p.shares + p.comments` to compute post-level interactions while preserving valid shares and comments.
- **Result Summary:** Low Follower Users average **3,648.40** interactions per post, whereas High Follower Users average **3,604.43** interactions per post. Audience scale does not grant higher engagement per post.
